Compiling the Files:

1. javac lab5.java to compile the main class file.
2. javac commands.java to compile the auxiliary class file.

Running the program: Type `java lab5 6500 planet2.pnl.nitech.ac.jp 5000`. This command will connect to the Bootstrap server in the planet lab overlay and join the network.

Then type the command “**search**” in the node. This command will start searching for a query file from the queries.txt file.
